

#### ABSTRACT OF DISCLOSURE

Although the size, shape, material and design characteristics may change for motorcycle make or model, and possibly just for cosmetic appearance.

What is claimed is the concept of a weight bearing bracket attached to the frame sufficient for passenger transportation, without touching the finer finishes of the motorcycle. Following the contour of the rear fender of differing shapes.

While keeping passenger center of gravity at a minimum for safety and to provide a safer and more comfortable ride through the creation of a backrest bracket feature mounted to a generic sissy bar.
